CUSTOM AI · SECURITY · FORWARD DEPLOYED ENGINEERS

Find the gaps. Stay secure.

We build **custom AI systems** on local and cloud models, test your AI, apps and servers for security gaps, and send senior engineers to work inside your team. For businesses across the UK and Ireland.

01 — PLAIN ENGLISH

Reports you can read.

No jargon. A clear summary, a ranked fix list and a retest once the gaps are closed.

02 — SECURITY BUILT IN

Tested before go-live.

Every build is pen tested, hardened and given guardrails before your team or customers use it.

03 — FULL OWNERSHIP

Everything is yours.

Code, accounts and infrastructure belong to you. No lock-in, no rented platforms, no licence surprises.

WHAT WE DELIVER

UK & IRELAND

Custom AI systems

Local models on your own servers, plus the harness around local and cloud AI — routing, tools, guardrails and tests.

AI & LLM security

Prompt injection and data leak testing, red teaming against the OWASP LLM Top 10, guardrails and safe agent permissions.

Audits & pen tests

Web app, API and cloud testing with a plain-English report, a ranked fix list and a retest once gaps are closed.

Hardening & compliance

Server hardening, patching and 24/7 monitoring — plus readiness for Cyber Essentials, GDPR, ISO 27001 and SOC 2.

Forward deployed engineers

A senior engineer who joins your team, on-site in Belfast or remote, to fix security and ship real work from week one.

Also: development & SEO

Websites, apps and internal tools built securely in-house — and SEO that helps customers find you on Google.

HOW WE WORK WITH YOU

1

Assess

A free call to understand your use case, data and risks. You get a written plan and a fixed price.

2

Pilot

One real use case, live in weeks — so you see value before committing more.

3

Secure

Pen tests, guardrails and access controls before wider roll-out.

4

Run

Monitoring, updates and security checks for a flat monthly fee.

FREE, NO-OBLIGATION CALL AND FIXED-PRICE QUOTE

Tell us what you need built — or what worries you about security.
